

Cyber security recommendation letter sample

To whom it may concern,

It feels great to draft this letter of recommendation to endorse my student, Ann Mary for the Master's degree in Cybersecurity at your revered university. In the position of a visiting lecturer in Computer Science, I have been teaching her for the last two semesters at Delhi University. Ann is a brilliant student and holds the potential to emerge as a successful cybersecurity expert. I am familiar with her academic strengths since I have taken her classes on computer networks, computer graphics, security threats, data structures, and analysis or algorithms. Considering her tenacity, motivation, and aptitude to learn, I highly recommend her as an applicant for the Master's program.

Academically, Ann has fulfilled our expectations and is good with the fundamentals. However, the cybersecurity field needs consistent practical expertise. Ann has significantly transformed her technical skills, regularly spending time in the laboratory and testing her abilities.

Ann is an intelligent student who loves to explore cybersecurity beyond her academic boundaries. Rightfully, she used to discuss new threats like ransomware attacks and whale phishing with me after classroom hours. Her appetite to master the latest technical knowledge to combat cyberthreats made her successful on the academic front. Also, I appreciate her practical skills in mitigating threats.

In one of the incidents that I remember about her, one of the systems in our accounts department was compromised.

Before we could call in our regular cybersecurity expert, Ann was prompt to isolate the compromised system so that the threat couldn't affect the remaining infrastructure. It was her technical competence and presence of mind that saved the entire accounts system. Her motive to stay abreast to the latest developments in the industry and take up security challenges make her an outstanding candidate.

Even outside the academic circuit, Ann has been proactive in participating in coding wars and inter-college competitions. Besides, she has worked on her organizational skills and teamwork over the last couple of years. She's a great leader, and demonstrated her mettle as she led a team of seven in her project.

Her commitment to remaining at the top of the industry and mitigate risks is a positive sign for her future employers. However, she currently needs a globally recognized platform where she can further streamline her skills in the field of cybersecurity. Your organization, I believe, would provide her with the right infrastructure where she can nurture her potential and mature as a competent cybersecurity professional. I wish her all the very best for her future and wish that she gets to study the Master's program at your esteemed university. Feel free to reach out to me for any further information about Ann.

Sincerely,
Prof. Siddharth Gupta,
Lecturer, Department of Computer Science,
Delhi University
